RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 24 pages. Original publisher: Hanover, N. H : US Army Corps of Engineers, Cold Regions Research and Engineering Laboratory ; Springfield, Va. : Available from NTIS, 1995 OCLC Number: (OCoLC)32998596 Subject: Frost heaving -- Mathematical models. Excerpt: . . . APPENDIX A: SOME SCALE FACTORS FOR CONVENTIONAL CENTRIFUGE MODELING PHYSICAL MODELING CONCEPTS scalar model laws. Closely following the analysis of Croce et al. ( 1985 ), this approach is presented Following the presentation of Langhaar ( 1951 ), here. Two assumptions are made: that soil can be treated as a continuum and that soil properties consider a physical variable of a prototype  $f(x, p)$  that are not affected by a change in acceleration  $y, z, t$  and the corresponding model quantity  $p$ . Dynamic similarity requires that all forces  $f(x, y, z, t)$ , where  $x, y$  and  $z$  are coordinates and  $t$  is time, have the same scale factor. The natural measures of a point within the structure,  $t$  is forces of interest include the weight force  $F$ , the time, and the subscripts  $p$  and  $m$  refer to the prototype external force  $F$ , the viscous force  $F$ , the inertia prototype and model, respectively. The function  $f$  is similar to the function  $f$  if the ratio of scale factors for length  $l$ , mass  $m$  and time  $t$  is constant for homologous points and homologous times. The constant ratio  $f/f$  is called the scale factor for the function  $f$ . Scale factors  $K$ , ( A1 ) tors can be derived...
